

Multi-View is a mobile application development tool that empowers you to:

- Format applications to multiple devices with one instance of logic
- Simultaneously view and edit applications on Android, BlackBerry, iOS and Windows

With one powerful platform, dcLINK, companies can mobilize their entire workforce – regardless of data transaction requirements, device form, connectivity or ERP system.

dcLINK Mobile Application Platform

- Diverse mobile device deployment options
- Standard integrations to leading enterprise applications and databases
- On- and off-network functionality
- Multi-language capability

MOBILEApps™

- Pre-built applications for sales, service and delivery
- Ready to deploy – decreased time to production and faster return on investment
- Easily tailorable to unique business requirements

Automated Data Collection

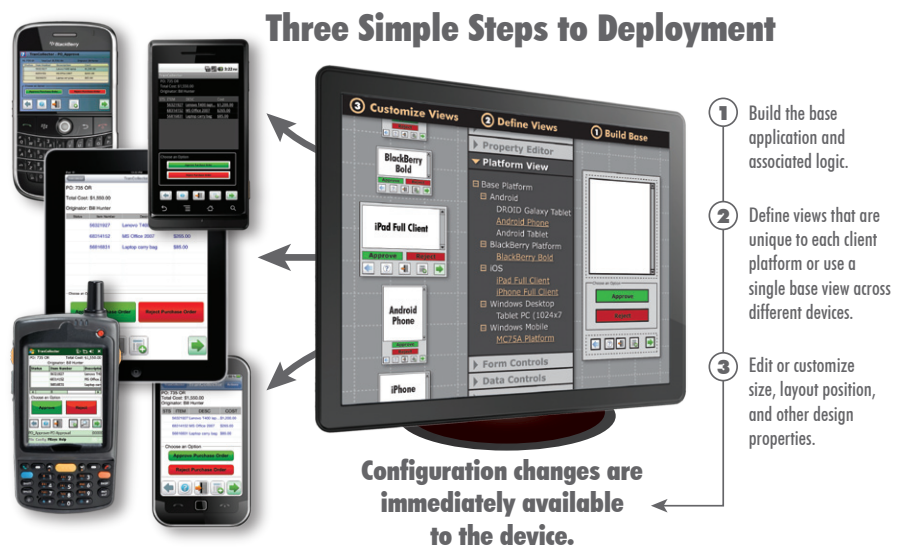

- Tracks inventory, assets and time with a single solution
- Supports barcode, voice, RFID and biometrics
- Integrates with multiple data capture devices and automation equipment

dcLINK® Multi-View™

In today's challenging economy, businesses around the world are turning to smartphones, tablets and ruggedized handhelds to mobilize business processes. However, the range of platforms and devices on the market can make application development and integration complex and costly.

Build Once, Deploy to Many

With dcLINK Multi-View, companies can automatically format mobile applications to multiple devices. Multi-View allows companies to modify client interfaces while maintaining just one instance of application logic. With a single tool, applications can be viewed, edited, sized and positioned to cater to multiple client platforms, including Android®, BlackBerry®, iOS®, Windows and Windows Mobile devices.

Multi-View is a feature of the dcLINK Mobile Application Platform™. dcLINK addresses the key capabilities of an enterprise mobility solution.

- Validated and certified integration to major enterprise applications, including Oracle and SAP
- Single platform to develop and deploy mobile applications
- Full- and thin-client support for a range of devices such as smartphones and tablets
- Off-network functionality so applications work regardless of connectivity

Learn More
