

SAP Americas Selects DSI's dcLINK® ASSETTrac™

DSI's fixed asset inventory data collection solution reduces costs, improves accuracy, and standardizes processes with integration to SAP Fixed Asset Module

Overland Park, KS — February 6, 2008 — Data Systems International, Inc. (DSI), announced today that SAP Americas will use dcLINK® ASSETTrac™ for data collection in its annual fixed asset inventory process in 37 facilities in North and South America. The company will also use DSI's fixed asset data collection software to track IT assets at SAP trade shows and events. SAP Americas is a subsidiary of SAP AG, the world's largest business software company.

dcLINK ASSETTrac, part of DSI's dcLINK® integrated suite of data collection software, reduces the cost of fixed asset inventory processes and improves the accuracy of the data collected.

"We considered DSI's data collection expertise, dcLINK ASSETTrac's depth of integration with our applications, and the business benefits we expect to gain as key factors in selecting this solution," said Rick Wenerd, of SAP Americas Asset Management Dept. "By using dcLINK ASSETTrac, we expect to conduct asset audits more quickly with reduced labor costs and improved data accuracy."

"DSI is pleased that SAP Americas has selected us to provide data collection functionality for their fixed assets inventory process. We are committed to helping them achieve the same outstanding benefits our other clients have realized using dcLINK ASSETTrac with integration to the SAP Fixed Assets Module," said Matt McGraw, President, DSI.

SAP Americas will use dcLINK ASSETTrac and mobile bar code readers to download data from the SAP Fixed Asset Module, conduct the inventory using standardized data collection processes, and upload their results to the SAP Fixed Asset Module. dcLINK ASSETTrac eliminates manual data entry and reduces opportunity for error.
